

The world's thinnest 100% natural granite veneer wallcovering is here!

EarthAnatomy™ is a natural thin stone veneer with a supportive fiberglass backing to transform it into a new-age, bendable, flexible, 100% pure stone veneer. It is a revolutionary brand of thin stone. It is the thinnest granite in the world and the only translucent granite for wall covering. Our thin stone veneer consists of a thin layer of granite veneer (.3mm) laminated to an equally thin layer of fiberglass (.5mm) for support and durability.

So, if you are an architect, designer, or artist looking for something totally new and amazing, you've come to the right place. Welcome to EarthAnatomy™

Photography and Finger Modeling by Stephanie Antshel

Every
so often, a perfect
idea meets a perfect
opportunity.

EarthAnatomy™ is
that idea. And now,
the opportunity is
here.
